READ THIS MANUAL BEFORE INSTALLING, OPERATING OR SERVICING THIS PRODUCT. THIS MANUAL CONTAINS IMPORTANT INFORMATION. MAKE THIS MANUAL AVAILABLE TO ALL PERSONS RESPONSIBLE FOR THE OPERATION, INSTALLATION, SERVICING AND MAINTENANCE OF THIS PRODUCT.
LIMITED WARRANTY

Seller warrants that each article (whether Gear Drive Products, Brake Products and/or Winch Products, all of which are covered hereunder) sold under this order shall at the time of shipment (i) conform to applicable specifications, and (ii) be free from defects in material and workmanship during normal and ordinary use and service (the "Warranty").

Buyer's exclusive remedy and Seller's sole obligation under this Warranty shall be, at Seller's option, to repair or replace any article or part thereof which has proven to be defective, or to refund the purchase price of such article or part thereof. Buyer acknowledges that Buyer is knowledgeable concerning the articles covered by this Warranty and sold in connection therewith which are being purchased, that Buyer has reviewed this Warranty and that the remedies provided hereunder are adequate and acceptable to Buyer.

This Warranty shall expire one (1) year from the date the article is first shipped by Seller. Notice of claimed breach of this Warranty must be given by Buyer to Buyer within the applicable period. Such notice shall include an explanation of the claimed warranty defect and proof of date of purchase of the article or part thereof for which warranty coverage is sought. No allowances shall be made by Seller for any transportation, labor charges, parts, "in and out" costs, adjustments or repairs, or any other work, unless such items are authorized in writing and in advance by Seller. Nor shall Seller have any obligation to repair or replace items which by their nature are expendable.

If an article is claimed to be defective in material or workmanship, or not to conform to the applicable specifications, Seller will either examine the article at Buyer's site or issue shipping instructions for return to Seller. This Warranty shall not extend to any articles or parts thereof which have been installed, used, or serviced otherwise than in conformity with Seller's applicable specifications, manuals, bulletins, or instructions, or which shall have been subjected to improper installation, operation, or usage, misapplication, neglect, incorrect installation, overloading, or employment for other than normal and ordinary use and service. This Warranty shall not apply to any article which has been repaired, altered or disassembled, or dissembled by personnel other than those of Seller. This Warranty shall not apply to any article upon which repairs or alterations have been made (unless authorized in writing and in advance by Seller). This Warranty shall not apply to any articles or parts thereof furnished by Seller to Buyer's specifications and/or furnished by Buyer or acquired from others at Buyer's request.

SELLER MAKES NO EXPRESS WARRANTIES AND NO IMPLIED WARRANTIES OF ANY KIND, OTHER THAN THE WARRANTY EXPRESSLY SET FORTH ABOVE. SUCH WARRANTY IS EXCLUSIVE AND IS MADE AND ACCEPTED IN LIEU OF ANY AND ALL OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING WITHOUT LIMITATION THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE.

Buyer expressly agrees that Seller is not responsible to perform any work or investigation related in any way to torsional vibration issues and is not responsible for the detection or remedy of Natural Frequency Vibration of the mechanical system in which the unit is installed. Buyer acknowledges, understands and agrees that this Warranty does not cover failures of the unit which result in any manner from the operation of the machine or unit at vibration frequencies at or near the natural frequency vibration of the machine in such a way that damage may result. Buyer expressly agrees that Seller is not responsible for failure damage or accelerated wear caused by machine or ambient vibration. Further, Buyer acknowledges and agrees that Buyer is always solely responsible for determination and final approval of the "application factor" which may be used in Seller's calculations and this application factor is 1.0 unless otherwise stated in Seller's quotation specifications.

The remedies for this Warranty shall be only those expressly set forth above, to the exclusion of any and all other remedies of whatsoever kind. The limited remedies set forth above shall be deemed exclusive, even though they may fail their essential purpose. No agreement varying or extending the foregoing Warranty, remedies, exclusions, or limitations shall be effective unless in writing signed by an executive officer of Seller and Buyer. This Warranty is non-transferable. If a party who had purchased articles from Buyer, or from persons in privity with Buyer, brings any action or proceeding against Seller for remedies other than those set forth in this Warranty, Buyer agrees to defend Seller against the claims asserted in such action or proceeding at Buyer's expense, including the payment of attorneys' fees and costs, and indemnify Seller and hold Seller harmless of, from and against all such claims, actions, proceedings or judgments therein. Buyer also agrees to defend and indemnify Seller of, from and against any loss, cost, damage, claim, debt or expenses, including attorneys' fees, resulting from any claims by Buyer or third parties to property or injury to persons resulting from faulty installation, repair or modification of the article and misuse or negligent operation or use of the article, whether or not such damage to property or injury to persons may be caused by defective material, workmanship, or construction.

ADVISORY: Winches and hoists are not approved for lifting or handling personnel or persons unless specifically approved in writing from Seller for the specific intended application.

Under no circumstances shall Buyer be liable (i) for any damage or loss to any property other than the warranted article or part thereof, or (ii) for any special, indirect, incidental, or consequential damage or loss, even though such expenses, damages, or losses may be foreseeable.

The foregoing limitations on Seller's liability in the event of breach of warranty shall also be the absolute limit of Seller's liability in the event of Seller's negligence in manufacture, installation, or otherwise, with regard to the articles covered by this Warranty, and at the expiration of the Warranty period as above stated, all such liabilities shall terminate. Buyer's purchase of any article(s) covered by this Warranty shall constitute acceptance of the terms and conditions hereof and shall be binding upon Buyer and Buyer's representatives, heirs and assigns. The laws of the Province of British Columbia shall govern Buyer's rights and responsibilities in regard to this Warranty and the transaction(s) subject hereto, and the Province of British Columbia shall be the exclusive forum and jurisdiction for any action or proceedings brought by Buyer in connection herewith or any dispute hereunder. If any of the terms and conditions contained within this Warranty are void, the remaining provisions thereof are and shall remain valid and enforceable.
SAFETY RECOMMENDATIONS

The planetary hydraulic winches are made for hoisting and lowering loads and to be operated by trained and professional personnel. They are not designed for operations involving lifting or moving personnel. The winches are powered by hydraulic power. The ropes / cables for hoisting operations are not supplied by PULLMASTER. The winches are always assembled in an application, they do not function as an independent machine and it is not allowed to use them as such.

The winches are to be used within the specifications as listed in the manual under “SPECIFICATIONS”. Other use as foreseen in the functional description of the hydraulic winch is not allowed without written permission from PULLMASTER.

1. Do not install, operate or service winch before reading and understanding manufacturer’s instructions.
2. The winch described herein is not designed for operations involving lifting or moving personnel.
3. Do not lift or carry loads over people.
4. Do not exceed recommended operating pressure (psi) and operating volume (gpm).
5. Do not jerk the winch. Always smoothly accelerate and decelerate load.
6. Do not operate a damaged, noisy or malfunctioning winch.
7. Do not leave a load suspended for any extended period of time.
8. Never leave a suspended load unattended.
9. Winch should be maintained and operated by qualified personnel.
10. Inspect winch, rigging, mounting bolts and hoses before each shift.
11. Warm-up equipment before operating winch, particularly at low ambient temperatures.
12. Verify winch function by raising and lowering a full test load to a safe height before each shift.
13. Do not weld any part of the winch.
14. Verify gear lubrication and brake circulation supply and return before operating winch.
15. Be sure of equipment stability before operating winch.
16. Wear proper clothing to avoid entanglement in rotating machinery.
17. Always stand clear of the load.
18. Use only recommended hydraulic oil and gear lubricant.
19. Keep hydraulic system clean and free from contamination at all times.
20. Maintain winch and equipment in good operating condition. Perform scheduled maintenance regularly.
21. Keep hands clear when winding wire rope onto the winch drum.
22. Do not use the wire rope as a ground for welding.
23. Rig the winch carefully. Ensure that the wire rope is properly anchored to the correct cable anchor slot at the cable drum.
24. Do not lift a load with a twisted, kinked or damaged wire rope.
25. Consult wire rope manufacturer for size, type and maintenance of wire rope.
26. Maintain five wraps of wire rope on the cable drum at all times.
27. In case of a power failure or breakdown leading to an unexpected stop of the hydraulic power circuit, stand clear of the area and the load being hoisted, take the necessary precautions to prevent access to area where the load is halted.
28. The noise level of the winch is 86 dBA measured on a distance of 1.00 meter, 1.60 meters high. The measuring equipment used was: Realistic #42-3019.
29. Clean up any oil spillage immediately.
30. Wear proper clothing and personal protection equipment such as, footwear, safety goggles and a hard hat. Read manual first.
**GENERAL DESCRIPTION:**
The PULLMASTER Model PL1 is a planetary hydraulic winch having equal speed in both directions. The main components of this unit are:

- Hydraulic gear motor
- Multi disc brake with static and dynamic function
- Over-running clutch
- Primary planet reduction
- Final planet reduction
- Brake housing
- End housing
- Cable drum

**FUNCTION IN FORWARD ROTATION (HOISTING):**
In forward rotation, the output torque and RPM of the hydraulic motor are transmitted to the sun gear of the primary planet reduction. The output of the primary reduction is transferred to the final sun gear, which is splined to the primary planet hub. The final planet assembly does not rotate, so the rotation is transmitted to the cable drum by the final drive planet gears. In forward rotation, or when a load is lifted, an over-running clutch, which connects the motor drive shaft to the automatic brake assembly, permits free rotation of the sun gear, without affecting the brake. When the winch rotation is stopped, the load on the cable drum causes the over-running clutch to lock and the maximum load is held safely by the disc brake.

**FUNCTION IN REVERSE ROTATION (LOWERING):**
In reverse rotation, or when the winch is pressurized for lowering a load, hydraulic pressure from the reverse side of the hydraulic motor is channelled to the brake piston, causing the brake piston to release the multi-disc brake against a number of brake springs. The over-running clutch, connecting the motor drive shaft to the brake assembly, locks, causing the brake discs to rotate between divider plates, which are engaged into the brake housing. If the load on the cable drum tends to effect the lowering speed, the resulting pressure drop in the brake piston causes friction between the brake discs and the divider plates. In this way, a completely smooth paying out speed can be achieved in a stepless operation by modulation of the winch control handle. When the control handle is returned to neutral position, rotation stops and the disc brake applies automatically. A hydraulic counter-balance valve or holding valve is not required for smooth and positive operation of the automatic brake.

During the lowering operation of the winch, the friction created by the brake discs results in heat. This heat is dissipated by the circulation of hydraulic fluid through the brake housing, supplied internally through the hydraulic motor. This circulation flow is internally vented to the return line flow through a check valve arrangement inside the hydraulic motor. The circulation flow is supplied only when a load is lowered. A separate vent line connecting the PULLMASTER Model PL1 with the hydraulic reservoir is not normally required.

(See TYPICAL HYDRAULIC CIRCUITS.)

**IMPORTANT:**
Pressure in the brake housing must never exceed 100 psi [7 bar] (Use drain line if pressure exceeds 100 psi [7 bar]). Excessive brake housing pressure will cause the safety valve located on top of the motor to leak. Brake housing pressure can be gauged at the safety valve port.
EXPLANATION OF MODEL CODING

PL 1 - XX - XX - XX - X XXXX

BASIC UNIT SERIES
SIZE OF UNIT
TYPE OF BRAKE
- 12 Automatic brake, counterclockwise hoisting, intravent
HYDRAULIC MOTOR
- 227 Gear motor
DRUM SIZE
- 1 4 13/16" Drum diameter x 7 1/8" flange diameter x 4" between flanges
DESIGN REVISION
SPECIFICATION NUMBER
Describes features not identified by preceding codes

NOTE: Clockwise or counterclockwise drum rotation is the direction of rotation for pulling or hoisting established by looking at the hydraulic motor.
Performance specifications are based on 1/4 inch wire rope.

1. **TYPICAL HYDRAULIC CIRCUIT - STANDARD CONTROL VALVE**

Refer to above hydraulic circuit for installations where the winch is controlled by an individual control valve. Note that the valve must have a “motor spool” (both winch ports open to tank in neutral position). A motor drain line is not required. Use drain line if pressure in the brake housing exceeds 100psi (7 bar).

2. **TYPICAL HYDRAULIC CIRCUIT - POWER BEYOND CONTROL VALVE**

Refer to above hydraulic circuit when the winch control valve is used in a circuit containing stacked valves controlling other functions, as occurs on hydraulic cranes and loaders. The winch control valve must have a “motor spool” and “power beyond” feature. The winch valve is shown upstream of the stacked control valves. If the winch control valve is located downstream of the stacked control valves, the valve stack must have the “power beyond” feature. A motor drain line is not required. Use drain line if pressure in the brake housing exceeds 100psi (7 bar).
3. **TYPICAL HYDRAULIC CIRCUIT - STACKED CONTROL VALVE**

Refer to above hydraulic circuit when the winch control valve is one of several stacked control valves and has a “cylinder spool” (winch ports blocked in neutral position). In this configuration, the safety valve must be replaced with a drain line plumbed directly to the reservoir. The drain line cannot be connected to a common return line.

**IMPORTANT:** For proper function of the winch in any circuit, the return line back pressure measured at the motor return port and the brake housing pressure measured at the safety valve must not exceed pressures per SPECIFICATIONS.
RECOMMENDATIONS

HYDRAULIC FLUID:
The hydraulic fluid selected for use with PULLMASTER planetary winches should be a high grade, petroleum based fluid with rust, oxidation and wear resistance. Fluid cleanliness and operating viscosity are critical to winch reliability, efficiency and service life.

For optimum performance, the recommended viscosity range at operating temperature is 81 - 167 SUS (16 - 36 CS). For extreme operating conditions of short duration, the maximum viscosity range of 58 - 4635 SUS (10 - 1000 CS) should not be exceeded.

The winch recommended hydraulic fluid temperature operating range is 80 - 150F (27 - 66C). For extreme operating conditions of short duration, the maximum temperature range of -5 - 180F (-21 - 82C) should not be exceeded.

LUBRICATION:
The winch gear train requires oil bath lubrication. The winch is shipped from the factory without lubricating oil.

IMPORTANT: ADD LUBRICATING OIL UP TO THE LEVEL OF THE END HOUSING OIL FILL PORT BEFORE RUNNING WINCH.

Refer to INSTALATION DIMENSIONS for location of lubricating oil fill port. Refer to SPECIFICATIONS for quantity of oil required. For normal operating temperature use SAE 90 lubricating oil. Consult lubricating oil supplier or factory for temperature beyond normal operating range.

HYDRAULIC PUMP:
For maximum performance of the PULLMASTER planetary winch the hydraulic pump must supply the maximum flow of hydraulic fluid at the hydraulic pressure stated in SPECIFICATIONS.

HYDRAULIC CONTROL VALVE:
The standard control valve used for operating PULLMASTER planetary winches must have a four-way, spring return to neutral feature, which provides for open flow from the pressure ports of the winch to the reservoir in neutral position of the control (motor spool). It is important to point out that good speed control, especially when lowering a load, depends on the “metering” characteristics of the control valve. The better the oil flow is “metered”, the better will be the speed control.

HYDRAULIC PRESSURE RELIEF:
The hydraulic circuit for the PULLMASTER planetary winch requires a pressure relief set at the operating pressure (see SPECIFICATIONS). Usually, a pressure relief is part of the hydraulic control valve. Where this is not the case, a separate pressure relief valve must be installed and set at the recommended maximum pressure.

HYDRAULIC RESERVOIR:
It is recommended that the hydraulic reservoir has sufficient capacity to provide good heat dissipation in order to prevent over-heating of the hydraulic fluid. The hydraulic reservoir should be made from clean and scale-free material to prevent contamination of the hydraulic fluid. In order to prevent air from being mixed with the hydraulic fluid, the reservoir should have an over-flow baffle separating the return lines from the suction line and all return lines should enter the reservoir below the fluid level. The reservoir should be mounted close to and above the hydraulic pump in a location which provides for free air circulation around the reservoir.

HYDRAULIC FILTER:
Consult hydraulic component manufacturer for recommendation. Generally, 5 to 10 micron filters are acceptable. In order to prevent accidental stoppage of the return line flow, the filter should have a by-pass feature.

HYDRAULIC HOSES:
The following hydraulic hose with suitable fittings is recommended for the PULLMASTER Model PL1 planetary winch.

Pressure lines: SAE 100R2-8 or better
Motor drain line (when required): SAE 100R6-4 or better

It is recommended that larger hydraulic hose be installed where pressure lines are excessively long.

USE OF AN E STOP:
(FOR EUROPEAN MACHINERY DIRECTIVE APPLICATIONS)
The use of an E stop (emergency) is mandatory in the controls circuit. The E stop is to be placed in the operator’s control panel. The E stop must be designed and placed in line with EN 60204 and EN 418.
The initial installation or mounting of a PULLMASTER planetary winch is critically important for proper operation and performance. If the winch is mounted to an uneven surface, the centre line of the unit can be distorted to a point where the winch will not operate in either direction. It is therefore very important that the following instructions are observed when a PULLMASTER planetary winch is installed:

1) Make certain that the mounting platform is sufficiently strong in order to avoid deflection when a load is lifted.

2) Set the winch on the mounting platform and check for surface contact on all mounting pads of the winch.

3) If there is a space between the mounting surface and one of the mounting pads, the mounting surface is not even and the space below the mounting pad must be shimmed. If this condition exists, proceed as follows:
   a) Install mounting bolts snug tight on the three mounting pads which are in contact with the mounting surface. For mounting bolt size and grade, see INSTALLATION DIMENSIONS.
   b) Measure the space underneath the fourth mounting pad with a feeler gauge and use shim stock of equivalent thickness in the space between the mounting pad and the mounting surface.
   c) Only after this procedure, should the fourth mounting bolt be installed. Tighten all four bolts as per torque chart at back of manual.

4) Fill the winch with lubricating oil. See SPECIFICATIONS for oil volume required.

5) Use recommended circuit components and hydraulic hoses.

6) When required, the winch motor drain line must be connected directly to the reservoir. Do not connect to a common return line.

IMPORTANT: Excessive pressure at brake housing will damage the winch motor or oil seals. Safety valve does not prevent damage but serves as an indicator or warning of excessive pressure in the brake housing. Do not replace safety valve with a pipe plug. If necessary, replace with a drain line.

7) Before operating the winch with a load, verify that hydraulic fluid is circulating through the brake assembly by removing the safety valve and checking flow when the winch is run in the lowering direction.

NOTE: Pressure required to rotate the drum in forward direction at full speed without load may vary up to 500 psi (34 bar).

Pressure required to rotate the drum in reverse direction at full speed may vary from 350 to 700 psi (24-48 bar) depending upon load and from 700 to 1150 psi (28-79 bar) without load.
After the PULLMASTER planetary winch has been installed in accordance with the INSTALLATION INSTRUCTIONS, the wire rope can be fastened to the cable drum.

**IMPORTANT:** The ropes, chains, slings, etc. are not part of the winch and are not covered by this manual. Refer to manufacturer’s handling, inspection and maintenance recommendations to avoid potential accidents. For selection of ropes, etc. please check following product standards: DIN 15020, prEN818-1/9, prEN 1492-1/2, prEN 1677-1/3 and other relevant product standards.

1) The cable drum of the PULLMASTER planetary winch has two cable anchor slots, one for clockwise and one for counterclockwise hoisting. Standard rotation for hoisting is counterclockwise when looking at the hydraulic motor of the unit. It is critical to select the cable anchor slot which will permit winding of the wire rope on the drum in the correct direction of rotation. If the wire rope is wound on the cable drum in the wrong direction of rotation, the winch will have no braking capacity. Each winch is shipped from the factory with a label on the drum, indicating the correct cable anchor slot.

**WIRE ROPE INSTALLATION**

Counterclockwise hoisting winch shown.

Feed the wire rope through the cable anchor slot. Loop rope back into slot as shown. Insert cable anchor into slot, small end first and long side nearest the drum flange. Pull rope tight to wedge rope in slot.

2) On wire rope installation, care must be taken that the wire rope is wrapped completely around the cable anchor and properly pulled into the cable anchor slot in the cable drum. The cable drum requires 5 wraps of wire rope for safety.

3) The winch operation is controlled by a single control valve lever which has a “forward”, a “reverse” and a “neutral position”. Speed control in either direction is obtained by modulation of the control valve lever. Maximum line speed in either direction is obtained when the control valve lever is moved as far as it can go. The disc brake of the winch will come on automatically when the winch control lever is returned to “neutral”.

4) Always warm up equipment prior to operating winch, particularly in low ambient temperature. Circulate hydraulic oil through the winch control valve for several minutes to warm the hydraulic systems. To prime the winch with warm oil, operate the winch at slow speed, forward and reverse, several times.

5) To ensure proper winch installation and function, raise and lower a full test load to a safe height before using winch for regular operation at the start of each shift.

If, after a new installation, the winch does not function properly, refer to the “TROUBLESHOOTING” section of this manual.
GENERAL:
In most cases, when the hydraulic winch does not perform satisfactorily, the cause for malfunction is found somewhere in the hydraulic circuit. Before the winch is removed from its mounting and disassembled, all of the hydraulic circuit components should be checked for proper function.

IMPORTANT:
The hydraulic oil volume relates to the line speed or rpm of the winch.
Therefore, if the winch does not produce the specified maximum rated line speed or drum rpm, a loss of hydraulic flow somewhere in the hydraulic circuit can be analysed. If this condition exists, install a flow meter into the hydraulic circuit to check the volume of oil supplied to the pressure port of the hydraulic winch motor when the winch control is completely opened. The flow meter should indicate the maximum operating volume. If this test indicates a loss of hydraulic flow, check the hydraulic pump, the relief valve and the control valve. If the pump is driven by V-belts, check for belt slippage.

The hydraulic pressure relates to the pulling capacity of the winch.
If the winch will not produce the specified maximum line pull, install a pressure gauge in the pressure line leading to the hoisting port on the hydraulic winch motor. Stall the winch to prevent rotation of the drum and then open the control valve. Check the hydraulic pressure reading of the installed pressure gauge. If the pressure reads below the specified maximum operating pressure, look for trouble in the hydraulic pump, the relief valve and the control valve. If the hydraulic pump is driven by V-belts, check for belt slippage. When checking oil pressure and volume in the hydraulic circuit, verify that the hydraulic reservoir is filled to the top level and the hydraulic pump is running at maximum operating rpm.

Only after the hydraulic system has been checked and found to be in order, use the following indications for probable causes of failure in the winch:

<table>

Refer to the SERVICE INSTRUCTIONS if it becomes necessary to disassemble the Model PL1 winch.
SERVICE INSTRUCTIONS

GENERAL:
Before disassembling the PULLMASTER Model PL1 planetary winch, read and understand the following instructions.

Replace expendable parts such as O-rings and oil seals when reassembling the winch. Have a winch seal kit (Part No. 23149) on hand before the unit is disassembled.

NOTE: Backup washers may be included with seal kit. Install with oil seals as per instructions. If not present in seal kit, the oil seals supplied do not require back up washers.

Disconnect all hydraulic hoses, remove the winch from its mounting and relocate to a clean working area, similar to one used for service work on any other hydraulic component. Special tools are not required to service the winch. Adjustments and calibrations are not required.

All parts, as they are removed from the winch assembly, should be inspected for wear and damage. Worn or damaged parts must be replaced. Thoroughly clean parts before reassembly. Do not use solvent to clean the brake friction plates.

During reassembly, lubricate all O-rings and oil seals with grease before installation.

In the following service instructions, reference to parts is made by numbers and shown on the applicable group drawings.

DISASSEMBLY

The motor is not user serviceable and must be replaced if not functioning properly. Contact your nearest PULLMASTER Distributor for a replacement. Remove the motor assembly as follows:

REMOVAL OF HYDRAULIC MOTOR ASSEMBLY:
1) Remove four capscrews, item 815, and lockwashers, item 817. Pull motor assembly, item 850, out of winch assembly. Allow brake springs, item 752, to expand safely by unscrewing capscrews one turn at a time.
2) Remove and discard O-ring, item 707.
3) Remove connecting tube, item 830. Remove and discard two O-rings, item 831 and item 836.

DISASSEMBLY OF BRAKE HOUSING ASSEMBLY:
The majority of service and repair work is done on the brake housing assembly which is accessed by removing the hydraulic motor assembly. Disassemble brake housing assembly as follows:
1) Remove five brake springs, item 752. Examine springs for damage and measure overall length. Overall spring length should be 1.21 inch. Springs measuring less than 1.17 inch should be replaced.
2) Pull brake piston, item 750, out of brake housing, item 700. Verify orifice in brake piston is clear and unobstructed.
3) Remove and discard two O-rings, item 751.
4) Thoroughly inspect brake piston outer diameters and brake housing inner bores for scoring caused by hydraulic fluid contamination. Minor surface damage may be repaired by polishing with a fine emery cloth.
5) Pull primary sungear, item 440, with brake hub assembly, item 720, and clutch aligners, item 722, from brake housing.
6) Remove circlip, item 721. Remove brake hub assembly, item 720. Brake hub assembly consists of brake hub with a permanently installed over-running clutch, item 723.
DANGER

MINOR SURFACE DEFECTS WHERE THE OVER-RUNNING CLUTCH ENGAGES THE PRIMARY SUNGEAR WILL RESULT IN BRAKE FAILURE AND ALLOW THE LOAD TO DROP, CAUSING PROPERTY DAMAGE, SEVERE INJURY OR DEATH. THOROUGHLY INSPECT THIS AREA AND IF NECESSARY, REPLACE PRIMARY SUNGEAR AND BRAKE HUB ASSEMBLY AS A SET.

7) Thoroughly inspect sungear, item 440, particularly surface where over-running clutch, item 723 engages. If any indentation or surface damage is detected, replace sungear and brake hub assembly as a set.

8) Remove two clutch aligners, item 722. Inspect and replace if damaged.

DANGER

DAMAGED FRICTION OR DIVIDER PLATES WILL REDUCE BRAKING CAPACITY AND ALLOW THE LOAD TO DROP, CAUSING PROPERTY DAMAGE, SEVERE INJURY OR DEATH. SOLVENT MAY DAMAGE THE FRICTION PLATES. DO NOT USE SOLVENT TO CLEAN THE FRICTION PLATES. PERFORM THOROUGH INSPECTION AND IF NECESSARY, REPLACE FRICTION AND DIVIDER PLATES AS A SET.

9) Remove two friction plates, item 715, and three divider plates, item 713, and inspect for damage or wear. Plates should be flat and smooth. Plates should not show heat discolouration. Paper material on friction plates should be intact and grooved. If any damage is detected, replace friction and divider plates as a set.

10) Remove brake spacer, item 712, thrust bearing, item 739, and thrust washers, item 737. Inspect bearing and washers and replace if damaged or worn.

11) Remove and discard oil seal, item 711, and backup washer, item 710.

DISASSEMBLY OF PRIMARY DRIVE:

If the primary drive requires service or repair, disassemble as follows:

1) Remove pipe plug, item 101, from end housing, item 100, to drain lubricating oil from winch interior.

2) Remove eight capscrews, item 555, and lockwashers, item 553. Remove two tie bars, item 556. Stand winch upright on its end housing.

3) Lift brake housing, item 700 with bearing, item 701, out of cable drum, item 500. Remove and discard oil seal, item 515.

4) Inspect planet hub stopper, item 704, for wear and replace if less than .10" thick.

5) Remove primary planet hub assembly from cable drum. Inspect planet hub stopper, item 402, for wear and replace if less than .10 inch thick.

6) Inspect three primary planet gears, item 420, for damage or wear. If it is necessary to remove planet gears, remove circlip, item 411, and press planet pin, item 410, out of planet hub, item 400. Inspect needle bearing, item 423, and replace if damaged.

7) Remove circlip, item 341, and slide final sungear, item 340, out of primary planet hub. Inspect final sungear for damage or wear.
DISASSEMBLY OF FINAL DRIVE:
If final drive requires service or repair, disassemble as follows:
1) Remove final planet hub assembly from cable drum.
2) Inspect three final planet gears, item 320, for damage or wear. If it is necessary to remove planet gears, remove circlip, item 311, and press planet pin, item 310, out of final planet hub, item 300. Inspect needle bearings, item 323, and replace if damaged.
3) Pull end housing, item 100, out of cable drum ball bearing, item 507.
4) Remove circlip, item 513. Push ball bearing, item 507, out of cable drum. Inspect and replace if damaged.
5) Remove and discard oil seal, item 505.
6) Inspect cable drum gear teeth for damage or wear.

REASSEMBLY
Thoroughly clean all parts. Use only new, well-greased O-rings and oil seals. Unless otherwise specified, torque fasteners per BOLT TORQUE CHART at back of manual.

REASSEMBLY OF FINAL DRIVE:
Reassemble final drive by reversing the disassembly procedure.
1) Press new, well-greased oil seal, item 505, into cable drum, item 500.
2) Press ball bearing, item 507, into cable drum and secure with circlip, item 513.
3) Press end housing, item 100, into the cable drum ball bearing, item 507.
4) Reassemble final planet hub assembly. Press needle bearing, item 323, into planet gear, item 320. Press planet pin, item 310, into the final planet hub, item 300. Retain with circlip, item 311.
5) Insert final planet hub assembly into the cable drum. Ensure that the planet hub spline is fully engaged.

REASSEMBLY OF PRIMARY DRIVE:
Reassemble primary drive by reversing the disassembly procedure.
1) Verify circlip, item 341, is installed on final sungear, item 340.
2) Install final sungear into primary planet hub, item 400, and secure with second circlip, item 341.
3) Reassemble primary planet hub assembly. Press needle bearing, item 423, into planet gear, item 420. Press planet pin, item 410, into primary planet hub, item 400. Retain with circlip, item 411.
4) Verify planet hub stopper, item 402, is installed on planet hub.
5) Insert primary planet hub assembly into cable drum. Ensure that final sungear, item 340, is fully engaged with final planet gears, item 320.
6) Press ball bearing, item 701 into cable drum.
7) Install new, well-greased oil seal, item 515, into brake housing, item 700. Verify planet hub stopper, item 704, is installed on brake housing hub. Lower brake housing into cable drum.
8) Use eight capscrews, item 555, and lockwashers, item 553, to secure tie bars, item 970.
9) Install pipe plug, item 101, into end housing.
REASSEMBLY OF BRAKE HOUSING ASSEMBLY:
Reassemble brake housing assembly by reversing the disassembly procedure.

1) Press new, well-greased oil seal, item 711, and backup washer, item 710, into brake housing bore, item 700.

2) Install a thrust bearing, item 739, with thrust washer, item 737, on either side.

3) Position a sprag clutch aligner, item 722, on either side of brake hub assembly, item 720. Carefully slide primary sungear, item 440, into brake hub assembly and secure with circlip, item 721.

**IMPORTANT:** For proper brake function, verify that brake hub rotation is correct. When viewed from the motor end, the primary sungear must turn freely clockwise and lock in the counter clockwise direction.

4) Install the primary sungear assembly, carefully twisting the shoulder of the sungear through the oil seal, item 711. Ensure that the oil seal is not damaged as the sungear is installed.

**DANGER**

INCORRECT ASSEMBLY OF THE FRICTION PLATE AND DIVIDER PLATE STACK WILL REDUCE BRAKING CAPACITY AND ALLOW THE LOAD TO DROP, CAUSING PROPERTY DAMAGE, SEVERE INJURY OR DEATH. REASSEMBLE PER INSTRUCTIONS.

5) Install brake spacer, item 712, into brake housing, item 700. Starting and finishing with a divider plate, alternately install three divider plates, item 713, and two friction plates, item 715.

6) Install new, well-greased O-rings, items 751 and 753, into the glands of the brake piston, item 750. Carefully install brake piston in the brake housing. Rotate the piston to align the connecting tube hole with the corresponding hole in the motor adaptor.

7) Install five brake springs, item 752.
REPLACE HYDRAULIC MOTOR ASSEMBLY:
Replace the hydraulic motor assembly by reversing the removal procedure.

1) Install new O-ring, item 831, on larger end of connecting tube, item 830, and new O-ring, item 836 on smaller end. Apply grease liberally, and insert smaller end of connecting tube into hole on inner face of motor, item 850.

2) Check safety valve, item 840, on motor for proper sealing. Install new, well-greased O-ring, item 707, on flange of motor. Carefully lining up connecting tube with hole in piston, fasten motor, item 850, to brake housing by using four hex head capscrews, item 815, and lockwashers, item 817. Tighten screws one turn at a time to evenly compress springs.

IMPORTANT: Before operating the winch, add lubricating oil up to the level of the end housing oil fill port. (Refer to INSTALLATION INSTRUCTIONS for location of fill port. Refer to SPECIFICATIONS for oil volume required.)

To ensure proper reassembly, run the winch in both directions without load.

DANGER

LIFTING A LOAD WITH A NEWLY SERVICED WINCH WILL ENABLE AN INSTALLATION OR SERVICE PROBLEM TO GO UNDETECTED AND ALLOW THE LOAD TO DROP, CAUSING PROPERTY DAMAGE, SEVERE INJURY OR DEATH. TO ENSURE PROPER REINSTALLATION, REFER TO PROCEDURES AND TESTS DESCRIBED IN "INSTALLATION" AND "OPERATING INSTRUCTIONS".

* Do not substitute. Available from PULLMASTER or Authorized Dealer Only.
Winch gear train lubricating oil should be changed after the initial six months or 50 hours of operation, whichever comes first. Lubricating oil should then be changed every 12 months or 500 operating hours, whichever comes first.

Hydraulic system fluid should be changed at least once every 12 months.

For optimum performance over an extended period of time, the following preventive maintenance service should be done every 12 months or 500 operating hours, whichever comes first:

1) Disconnect all hydraulic hoses and remove the winch from its mounting.

2) Disassemble the winch as per instructions.

3) Discard and replace all O-rings and oil seals.

4) Clean all parts and inspect for wear and damage as per instructions. Replace worn or damaged parts as required.

5) Reassemble the winch as per instructions.

6) Follow INSTALLATION and OPERATING INSTRUCTIONS when returning winch to its mounting.

When ordering parts for the PULLMASTER Model PL1 planetary winch, always quote the complete model number, serial number and specification (spec) number (if applicable) of the unit.

**NOTE:** Unless otherwise specified, torque bolts per above chart.
The Three Basic Types of PULLMASTER Planetary Winches

RAPID REVERSE
H and HL Series
For winch operations where a load has to be lowered at high speed and with complete control the PULLMASTER planetary winches in the ‘H’ series offer reversing speeds approximately 4.5 times faster than forward speed. Models in the series are available in line pull capacities from 8,500 lb (3,856 kp) to 50,000 lb (22,680 kp).

RECOVERY
R Series
The ‘R’ Series PULLMASTER recovery winches are of the same design concept as PULLMASTER hoisting winches. Freespooling is a standard feature of this model and is offered with a manually actuated clutch or is suitable for hydraulic remote control.

Service for PULLMASTER planetary winches can be obtained through a world wide network of PULLMASTER distributors. For the distributor nearest to you contact the factory.

Use only authentic PULLMASTER replacement parts in the repair of a PULLMASTER Planetary winch.

Purchased items such as bearings, seals, O-rings, etc., can be supplied from the factory. However, a cross reference list for such parts is shown in the PARTS REFERENCE of this manual.

When in doubt about proper function, installation or repair of a PULLMASTER planetary winch please contact your nearest PULLMASTER Distributor or the factory.
